Level 2 — 5 marks/question

L2-Q1. (M) Frequency

P

CODE

```
n=input().replace("[","")
m=n.replace("]", "")
l=list(map(int,m.split(",")))
print("Element | Frequency")
print("-----")
a=list(set(l))
a.sort()
for i in a:
    print(i,"      |",l.count(i))
c=0
for i in a:
    if(c<l.count(i)):
        c=l.count(i)
        e=i
print(e," & ",c)
```

INPUT

[1,2,8,3,2,2,2,5,1]

OUTPUT

```
Element | Frequency
-----
1       | 2
2       | 4
3       | 1
5       | 1
8       | 1
2 & 4
```

L2-Q2. (M) Repeated

P

CODE

```
n=input().split("nums = ")[1]
seen=[]
dup=0
for i in n:
    if(i not in seen):
        seen.append(i)
    else:
        dup=i
print(dup)
```

INPUT

nums = [1,2,3,4,2]

OUTPUT

2

L2-Q3. (M) Words-Lines

P

CODE

```
a=input()
l=a.split(". ")
c=0
for i in l:
    c+=len(i.split(" "))
print("No. of words in a line = ",round(c/len(l)))
cl=0
for i in l:
    cl+=1
print("No. of line in a file = ",cl)
```

INPUT

Machine learning (ml) is a kind of AI that lets software application become more precise at anticipating results without being specifically programmed to do so. machine learning algorithm utilize historical data as input to anticipate / predict the latest output values.

OUTPUT

No. of words in a line = 20
No. of line in a file = 2

L2-Q4. (M) Lucky

P

CODE

```
def rSum(n):
    if(n<10):
        return n
    else:
        return n%10+rSum(n//10)

def rProd(v):
    if(v<10):
        return v
    else:
        return v%10*rProd(v//10)

i=int(input())
sum=rSum(i)
prod=rProd(i)
if(sum==prod):
    print("Yes")
else:
    print("NO")
```

INPUT

1412

OUTPUT

Yes
